# UN predicts world economic growth to slip to 2.7% in 2026

- Global economic growth is forecast to decline to 2.7% in 2026 from 2.8% last year before increasing to 2.9% in 2027 - still down from the pre-pandemic average of 3.2% between 2010 and 2019, according to a United Nations report released on Thursday.
- UN report says US economic growth forecast to edge up to 2.0% in 2026 and 2.2% in 2027
- In China, economy projected to grow by 4.6% in 2026 and 4.5% in 2027
- Growth in India forecast at 6.6% for 2026 and 6.7% for 2027
- The World Economic Situation and Prospects report said that while a sharp increase in U.S. tariffs in 2025 created new trade tensions, the absence of broader escalation has helped limit disruptions to international commerce.

## WORLD ECONOMIC SITUATION AND PROSPECTS 2026

### GROWTH OF ECONOMIC OUTPUT

2.8% in 2025

2.7% in 2026

2.9% in 2027

# US inflation unexpectedly falls to 2.7%

**ONLY FOR DSV  
CUSTOMERS**

Annual change in US Consumer Price Index

— All items — Excluding food and energy - - Federal Reserve target (2.0%)

- Headline CPI at 2.7%: The "good news" story, but heavily distorted by data collection issues. We had a government shutdown during November
- Core CPI at 2.6%: Shows underlying inflation is sticky and still far from the Fed's 2% goal.
- Federal Reserve Target (2.0%): The gap remains significant.
- Key Takeaway: The market's positive reaction is fragile. With unreliable data, the Fed has no clarity and is unlikely to pursue further rate cuts from the current 3.50%-3.75% range.

# China's Record Trade Surplus with Europe Forces a Policy Reckoning

**ONLY FOR DSV CUSTOMERS**

- This trend reflects years of declining competitiveness for European products as the continent risks technological and industrial irrelevance. The new tariffs are defensive reaction to this structural decline.
- Europe Draws a Line on Low-Value Imports; The New Rule: **Starting July 1, 2026, the EU will impose a €3 fee on all shipments valued under €150.** This affects a staggering 93% of extra-community e-commerce.
- Shipments have tripled since 2022, from 1,5B reaching 4.6 billion packages in 2024. The volume makes customs control impossible, leading to unfair competition and tax asymmetries.
- This is a decisive policy shift. The EU is prioritizing the protection of its internal market over the principles of free trade, signalling a new, more confrontational era in its relationship with China. **The historic customs exemption for low-value goods will be fully eliminated by 2028**

# Europe: The EV Transition Hits the Brakes

<https://www.economist.com/business/2025/12/17/retreating-from-evs-could-be-hazardous-for-western-carmakers>

- The EU is committed to a hard 'zero emissions' mandate for all new cars from 2035, forcing a complete and rapid transition to battery electric vehicles (BEVs).
- The New Proposal: Brussels is softening the ban from a 100% "zero emissions" rule to a 90% CO<sub>2</sub> reduction target relative to 2021 levels.
- This **opens the door for plug-in hybrids and "range extenders" to be sold beyond 2035, a major concession to industry pressure from Germany and Italy.**
- Volkswagen lauded the move as "pragmatic" and aligned with market reality.
- The top-down, politically-enforced transition is proving unworkable. Cooling EV demand, questionable profitability, and the threat of Chinese competition are forcing a more flexible, less dogmatic approach.

# US Supreme Court delays tariff decision on January 14

May 28, 2025

The Court of International Trade (CIT) declares the "fentanyl" and reciprocal tariff executive orders "invalid as contrary to law" and issues a permanent injunction.

September 9, 2025

The Federal Circuit affirms the CIT's core finding that the tariffs exceed the President's authority under IEEPA, but vacates the universal injunction...  
**The stay remains in place pending a Supreme Court appeal.**

January 14, 2026

The date the Supreme Court is scheduled to issue its next round of rulings.

May 29, 2025

The Court of Appeals for the Federal Circuit issues an immediate administrative stay of the CIT's injunction, keeping the tariffs in effect pending appeal.

November 5, 2025

The Supreme Court hears oral arguments in the case, *Learning Resources v. Trump*.

**ONLY FOR DSV  
CUSTOMERS**

**Ruling Expected:** January 14; no decision announced

**Case Focus:** Legality of Trump's global tariffs under IEEPA (1977 emergency law). Tariffs Background: Imposed via national emergency; cover most imports, citing trade deficits & drug trafficking.

**Court Signals:** Justices sceptical about applying IEEPA to broad trade policy; lower courts ruled Trump exceeded authority.

**Impact:** Businesses & global partners await clarity; Trump warns overturning tariffs would harm U.S. economy. Over USD 150 Bn would need to be refunded

# China to abolish solar export tax rebates in April

**ONLY FOR DSV  
CUSTOMERS**

China will eliminate value-added tax (VAT) export rebates for photovoltaic products from April 1, 2026, according to a joint notice released on Jan. 9 by the Ministry of Finance of the People's Republic of China and the State Taxation Administration.

Under the policy adjustment, VAT export rebates for solar products will be fully removed from April 1, 2026. For battery products, the export rebate rate will be cut from 9% to 6% between April 1 and Dec. 31, 2026, before being eliminated entirely from Jan. 1, 2027.

Market analysts say the latest move will materially increase export costs for Chinese PV and battery manufacturers. However, with a roughly three-month transition period before the new policy takes effect, some expect a surge in outbound shipments in the first quarter of 2026 as companies accelerate exports ahead of the deadline.

**ONLY FOR DSV  
CUSTOMERS**

# Global Port Congestion

We have passed the historical level of global congestion, above 2022

Port Congestion Week 2:

**3,15m** TEU

**9,3%** port congestion

**6,1%** Cape diversion

# European ports and North Asia ports face severe congestion

**ONLY FOR DSV CUSTOMERS**

European port congestion is not improving

- Severe winter weather, including heavy snow, ice, and freezing temperatures, is causing major disruptions across Northern European ports and inland transport networks. Key terminals in Rotterdam and Hamburg are experiencing reduced productivity, while trucking and rail services face significant delays and cancellations due to hazardous conditions.
- Carriers like Maersk and Hapag-Lloyd report widespread congestion and advise customers to collect containers early and clear snow before delivery.
- Despite efforts by terminal operators and winter service teams, forecasts predict worsening conditions with more snow and storms, increasing pressure on supply chains and raising the risk of further operational pauses.

**ONLY FOR DSV  
CUSTOMERS**

# Current items to watch in today's market

## Pre-Chinese New Year rate push

We see rates going up before Chinese new year, futures are expecting a big correction afterward.

## Alliance competition

Monitor further network announcements from other alliances in response to the Premier Alliance new network update

## Congestion levels

Any significant easing in port delays (especially in North Asia and North Europe) will be a leading indicator downward rate pressure.

**ONLY FOR DSV CUSTOMERS**

# The defining wildcard: The Suez Conundrum

**ONLY FOR DSV  
CUSTOMERS**

## The current state

More than three months have passed since the last Houthi attack on commercial shipping.

Despite this, traffic remains ~60% below pre-crisis levels (source BIMCO)

## The real barrier is not attacks, but insurance:

War risk insurance premium is 0.5% and the pre-crisis rate was 0.02 %

It is still cheaper for many vessels to sail around Africa (now that bunker cost have also collapsed)

# Potential carrier strategies to return to Suez canal

**ONLY FOR DSV  
CUSTOMERS**

A return to the Suez Canal will cause 'multiple months of reshuffling, disruption, and congestion,' with stable services not in place until mid-2026 in a best-case scenario, this most likely will start after Chinese new year (if no disruptions will appear):

- Massive Capacity Influx: Shorter transit times would instantly flood the market with excess effective capacity.
- Shorter transit times will lead to a sudden spike in on-site inventories, Shippers will be forced to change sourcing patterns, potentially holding new orders to manage the inventory influx.
- Schedule Pandemonium: An entire global fleet shifting routes simultaneously would overload key ports in Asia and Europe
- Forced Inaction: Carriers would be forced to take ships offline to rebalance the market, creating further uncertainty.

A "return to normal" in the Red Sea would be the single most disruptive event for the 2026 container market.

# Maersk completed a second transit test through the red sea

In the second week of January, Maersk completed a second transit through the Bab al Mandeb strait.

The Vessel Maersk Denver, (US Flag vessel part of the India-Middle East to East Coast North America service) successfully navigated the region northbound from January 11-12 without incident

This transit is notable not for its size, but for its specific characteristics, making it a critical barometer of Maersk' risk assessment and future intentions.

**ONLY FOR DSV

## Key Contractual Detail

Contracted to carry cargoes for the U.S. government.

# December U.S. Container Imports Post Small Month-over-Month Increase Closing 2025 Just Under 2024 (-0,4%)

- U.S. container imports post seasonal increase in December.
- December imports posted a modest 2% gain over November but were 5.9% lower than December 2024, Total container imports in 2025 were **28,079,201 TEUs**, down 0.4% from **28,196,462 TEUs in 2024** and reversing what was nearly 10% year-over-year growth at the start of the year.
- This gradual softening likely reflects a combination of frontloaded shipments in early 2025, tariff-driven volatility and a potentially cooling economic environment, which collectively narrowed and ultimately eliminated annual container import growth.

**ONLY FOR DSV CUSTOMERS**

## 2021-2025 U.S. Container Import Volume (TEUs)

FE-WCNA Capacity Share by Carrier (Week 50, 2025)

Winners & Losers (YoY Capacity Change)

| Gainers              | Decliners          |
|----------------------|--------------------|
| Hapag-Lloyd (+69.4%) | Yang Ming (-39.7%) |
| HMM (+41.4%)         | ONE (-37.2%)       |
| Maersk (+25.9%)      | MSC (-17.6%)       |

Total Weekly Capacity (TEU)

Carriers are actively managing capacity through service adjustments and blank sailings in a highly competitive environment.

# Premier Alliance (HMM, ONE, Yang Ming) confirms network expansion

## First mover

- Premier Alliance carriers are the first to announce their 2026 service network

## Competitive pressure

- This move set the stage for further intensification of carrier competition

## Route strategy

- A notable decision to retain the current Cape of Good Hope routing until further notice, indicating continued avoidance of the Suez route

The battle for market share in the post-pandemic era is already beginning, with alliances making aggressive capacity and network moves

**ONLY FOR DSV  
CUSTOMERS**

# EU ETS, Full emission coverage begins in 2026

**ONLY FOR DSV CUSTOMERS**

## 100% CO<sub>2</sub> Coverage

- From January 1, 2026, carriers must surrender allowances for 100% of verified CO<sub>2</sub> emissions.
- This completes the phase-in from 40% in 2024 and 70% in 2025.
- The era of partial exemptions is over.

## Expanded Gas Portfolio

- For the first time, Methane (CH<sub>4</sub>) and Nitrous Oxide (N<sub>2</sub>O) are included in the ETS scope.

**ONLY FOR DSV

# Global Schedule Reliability at 64,1 %

**ONLY FOR DSV  
CUSTOMERS**

- In November 2025, global industry schedule reliability improved M/M by 2.8 percentage points to 64.1%, bringing it back in line with the levels seen between May and September. This is also the second-highest recorded figure for November.
- On a Y/Y level, schedule reliability was up 9.5 percentage points. The average delay for LATE vessel arrivals decreased M/M by -0.16 days to 4.88 days, making it the second-lowest figure for this month. On a Y/Y level, the November 2025 figure was -0.54 days lower.
- Maersk was the most reliable top-13 carrier in November 2025 with schedule reliability of 78.1%, followed closely by Hapag-Lloyd with 77.1%. MSC followed with 68.5% and was one of three carriers in the 60-70% range. The remaining eight carriers were all in the 50-60% range. ZIM was the least reliable carrier in November 2025 with schedule reliability of 52.8%. PIL recorded the largest M/M improvement in schedule reliability in November 2025 of 11.2 percentage points. ZIM was the only carrier to record a M/M decline, at -0.8 percentage points.
- On a Y/Y level, all 13 carriers recorded an improvement in schedule reliability in November 2025, with Hapag-Lloyd recording the largest Y/Y increase of 23.7 percentage points.

# Europe Inbound

FEWB  
Asia to Europe

ISC WB  
ISC to Europe

**ONLY FOR DSV  
CUSTOMERS**

- Asia to Europe
  - Volumes remain strong as is normal in weeks prior Chinese New Year. Roll pools will keep the volume high, till they taper off end February.
  - Rates have more than doubled to the Med since Mid Oct. - a bit less to North Europe but seem to be slowly stabilizing.
  - Capacity is normal to high, but the surge in volume is even stronger, surpassing the available space.
- ISC to Europe
  - Volumes are down trending compared to Nov & Dec where we saw a strong cargo rush.
  - Carriers are complaining about missing bookings – peak season not as expected to begin in Jan but most likely in Feb.
  - Grape harvest will hit shipping industry by begin of Feb. We expect peak season to begin then together with tighter space scenario and increasing spot / FAK freight rates.

TAWB  
Europe to North  
America

**ONLY FOR DSV  
CUSTOMERS**

- Europe to Asia
  - Soft market is expected to continue. Vessel utilization and available equipment won't be any issue at all. Consequently, rates will supposedly remain stable in Q1.
  - Winter weather might lead to operational issues in some regions and congestion is an ongoing issue as well – but overall, no massive disruptions anticipated.
- Europe to North America
  - Rates have softened slightly; however, this decrease is largely offset by the EU ETS increase eff. Jan, resulting in broadly stable overall cost levels. Demand remains soft and stable at subdued levels.
  - Capacity reductions remain likely as carriers continue to adjust their networks; structural risks persist and further service rationalizations can't be ruled out. Blank sailings continue as carriers align supply with weak demand.

aircargo news

5 / 12 / 2025

"E-commerce has been a driving force at Glasgow Prestwick Airport (PIK) as it strives to grow its air cargo volumes and move up the UK airport ranks.

China Southern Air Logistics, Air China Cargo and Beijing Capital Airlines all began scheduled cargo services this year, with plans to increase frequencies. [...]"

# 2026 outlook for global air cargo demand and supply

**ONLY FOR DSV

## Global Air Cargo Demand Growth

## Global Air Cargo Supply Growth

The air cargo market is normalizing after years of volatility. With passenger fleet belly capacity fully restored and demand growing only moderately.

# The winner of 2025: Vietnam unprecedented Air Trade Expansion

Vietnam's performance exemplifies the regional disparities in growth and the rapid shifts in global manufacturing and supply chain hubs (South China, Cambodia and Thailand)

# 86%

Vietnam's year-over-year air trade growth, leading all major markets.

# The MD11 Grounding ripple effect

**ONLY FOR DSV  
CUSTOMERS**

Initial Situation: Following the UPS crash, a majority of MD11 freighters remain grounded.

Primary Impact Analysis: This has a limited direct impact on international 3PLs, as 70% of MD11 freighter capacity was deployed on the domestic US market.

The Secondary Effect: To cover the domestic shortfall, integrators are now tapping into the ACMI (Aircraft, Crew, Maintenance, and Insurance) market for wide-body freighter capacity.

**This secondary demand from integrators is tightening the available intercontinental freighter capacity** for the broader market, creating a subtle but real capacity constraint.

# The 10 fastest growing cargo airports 2025

**ONLY FOR DSV  
CUSTOMERS**

Demand growth out of China, mainly Shanghai, Zhengzhou and Ezhou

The role of transit hubs including Dubai (the world's fastest-growing airport capacity) as a distribution point, to (amongst others) Europe

Growing final destinations, including Miami, Budapest (Europe's fastest-growing airport) for E-commerce demand.

## Top 10 Fastest-growing cargo airports in 2025

Tonnes capacity growth

Notes: Airport absolute tonnes growth of freighters or WB passenger capacity;
